                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  660
                                                                                                                                                                      were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (15 days after flowering).

Soflavon enethyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCTGAAATGCATGGTGTTGGAACGTCCAAATGTTGTGGAAAATTTTGTCAGGAAGCAACAA 720

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                797
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                796
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  857
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   856
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       coding sequence from Alfalfa. The present invention relates to a method for genetically manipulating the level of biologically active IOMT. The method involves transforming the target plant with a DNA fragment (the present sequence) to form a transgenic plant. IOMT is useful as foodstuff, nutritional supplement, animal feed supplement, nutraceutical and as a pharmaceutical. Transgenic expression of IOMT in legumes is useful for engineering both phytoalexin levels for improved disease resistance, and health promoting nutraceutical phytochemicals. IOMT is useful for engineering isoflavone 4 "O-methylation, or other organisms, that do not naturally produce isoflavonoids.

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAA29321-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srr1c and ss11c were prepared from soybean embryo (9) days after flowering), root, 8-day old root and seed (25 days after flowering).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide encoding flavonoid biosynthetic enzymes for creating transgenic plants and for immunological screening of cDNA libraries

CDNA libraries se4, sr1, srr1c and ss11c were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide encoding flavonoid biosynthetic enzymes for creating transgenic plants and for immunological screening of cDNA libraries

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAA29121-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDA libraties se4, sr1, srr1c and ssl1c were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Plavonoids serve as coligments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologies, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80

old Yook and seed (25 days arter 110002110g).
Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAA29321-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. cDNA libraries se4, sr1, srr1c and ss11c were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).
                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide encoding flavonoid biosynthetic enzymes for creating transgenic plants and for immunological screening of cDNA libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1053 BP; 323 A; 198 C; 226 G; 306 T; 0 other;

Glycine max isoflavone O-methyltransferase clone se4.pk0007.a11

(first entry)

26-SEP-2000

AAA29321

BP.

AAA29321 standard; cDNA; 1053

O-methyltransferase; soybean; degradation; daidzein; flower colour; growth; pollination; irradiation; ss.

Isoflavone (Flavonoid; 1 Glycine max 1

A vector containing the DNA can be used to transform a microbe for the recombinant preparation of the enzyme. The enzyme can be used to prepare a secondary metabolite of a plant derived from reticuline which is useful as a raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             116

The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors. GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCAGTTTTGAGGGGCTAGATTCCATGGTGGATGTTGGTGGTGGAACTGGAACCACGGCC 125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     fucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GW4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the enzyme, as well as in gene replacement therapy. Sequences ABX17944 and ABX17747-ABX33716 represent DNA molecules encoding human GM4,6D peptides of the invention.
  cellular fucosylation; glycoconjugate fucosylation; transplant rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      peptide, for manufacturing complex carbohydrates, or as targets for screening GM4,6D antagonists for treating e.g. arthritis, or transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               515 TTCAATGAGGCAATGGCTTGTGATTCTCAGATGTTGAACTTGGCGTTTAGAGATTGCAAT

The peptide is useful for identifying GM4 bD inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the fucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4,6D peptide or a polymucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polymucleotide is useful in developing an assay for defects in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,GD) peptide. The peptide is useful for identifying GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fuocylation or diseases affected by the fuocylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antegonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the

RESULT 13

```
This DNA sequence encodes a caffeic O-methyltransferase (see AAY05661)

of maize. A polynucleotide having this sequence can be amplified from a cDNA library prepared from premeiotic to uninucleate tassel from a cDNA library prepared from premeiotic to uninucleate tassel AAX25226. The invention provides methods and compositions relating to altering light biosynthesis and/or the light composition of plants. Isolated nucleic acids (see AAX25196-16) that code for proteins (see AAY05657-77) involved in lighth biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cells (especially maize or sorghum), and transgenic plants and cells (especially maize or sorghum), and transgenic plants and cells (especially maize or sorghum), and transgenic plants and transforming a plant cell with a recombinant expression cassette comprising a lighth biosynthesis A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lighth biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) lighth biosynthesis in the plant. The plant lighths can be used as chemical feedstock. Plant material of increased lighth content can be used as a fuel source, and in the pulp and paper industry. Decreased lightin content and in the pulp and paper industry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  034 CACGGGAIGCAGGIGGGAAGGIAAIAAICIIGGA---IGIGGIAGIIGGAIAIAAACAGI 1090

The invention relates to methods for producing forage legumes or woody plants having altered lignin composition. Methods for transforming forage legumes with a DNA construct comprises alfalfa caffein acid 3-0. methyltransferase (CCOMT) enzyme or its fragment under a lignification-associated tissue specific promoter, resulting in the down regulation of the corresponding proposesion. The methods are useful for down-regulation of the suppression. The methods are useful for down-regulation of the corresponding homologous OMT genes, gene silencing, reduced OWT activity levels, reduced lignin content, and modified lignin composition in transgenic plants, and increased digestibility of transgenic plant materials in ruminant animals. The expression of CCOMT transgene produces the transformed plant and greatly improved forage in vivo digestibility, and for making lignins with altered dimer bonding patterns. Transforming forage legumes with all all the produce plants having modified lignin content and account of the content of the content plants having modified lignin and content in the produce plants having modified lignin and content and account of the content plants having modified lignin and content and account of the content plants having modified lignin and content and content and account of the content plants and plants and plants and plants and account of the content plants and plants and account of the content plants and account of the content plants and plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of the content plants and account of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          content and composition for direct comparison of the effects of lightin content and/or composition of forage digestibility. The methods are also useful for producing plants that are modified to alter lighins and improve pulping characteristics for the paper industry. The present CDNA
